### Precedências

Sem precedências

### Conhecimentos Prévios recomendados

Conhecimento em Psicologia Cognitiva / Biológica / Neurobiológica no nível BSc é útil. Além disso, o conhecimento elementar em Neurociência e Biologia / Química / Física é útil.

### Objetivos de aprendizagem (conhecimentos, aptidões e competências)

Nesta unidade curricular apresentam-se diferentes conceitos e modelos necessários à compreensão das bases biológicas dos processos cognitivos, comportamentais e emocionais. Será dado destaque aos resultados obtidos com metodologias e técnicas actuais, incluindo os métodos de neuroimagem, que permitem investigar as bases neuronais de processos cognitivos como a memória, linguagem, atenção e processos emocionais. Ao concluir a unidade curricular, o estudante deverá mostrar as seguintes competências: a) saber caracterizar a organização de diferentes processos cognitivos e emocionais; b) saber relacionar os diferentes aspectos da cognição e do comportamento com as suas bases biológicas; c) saber quais os tópicos actuais de investigação em Neurociências Cognitivas; e d) conhecer as principais metodologias de investigação em Neurociências Cognitivas; e) discutir tópicos actuais neste domínio científico.

### Conteúdos programáticos

- (1) Brain and mind from the perspective of Cognitive Neuroscience: An overview of the subject
- (2) Information processing infrastructure: Basic neurobiology & neurophysiology
- (3) Neuroanatomy
- (4) The first half of the perception-action cycle
- (5) Vision & object recognition
- (6) The second half of the perception-action cycle
- (7) The encoding-retrieval cycle in interaction with the perception-action cycle;
- (8) The neurocognition of language
- (9) The neurocognition of attention
- (10) Working memory: Cognitive Control

### **Metodologias de ensino (avaliação incluída)**

The theoretical classes follow the classical lecture method. Nevertheless, the student is constantly invited to participate in order to better understand the different concepts and topics presented in the course. Students will be evaluated by written examinations at the end of the course. In order to pass the course the student will score an average of at least 10 (max 20). In case the student does not achieve an average of at least 10, the student will be provided the opportunity to pass the course through a final written exam.

### Pre-requisites

no pre-requisites

### Prior knowledge and skills

Knowledge in Cognitive/Biological/Neurobiological Psychology at the BSc level is helpful. In addition, elementary knowledge in Neuroscience and Biology/Chemistry/Physics is useful.

### The students intended learning outcomes (knowledge, skills and competences)

This course presents concepts and models, based on neurobiology and information processing, needed to understand the neurobiological basis of cognition, emotion and behavior. Emphasis will be given to results obtained with current methodologies and techniques, including neuroimaging methods, which allow to investigate the neural basis of cognitive processes such as memory, language, attention and emotional processes. After completing the course, students must show the following skills: a) characterize the organization of different cognitive and emotional processes; b) know how to relate the different aspects of cognition and behavior to their biological basis; c) be acquainted with current research topics in Cognitive Neuroscience; d) identify the principal research methodologies in Cognitive Neuroscience; and e) know how to discuss current topics in this scientific field.

### Syllabus

- (1) Brain and mind from the perspective of Cognitive Neuroscience: An overview of the subject
- (2) Information processing infrastructure: Basic neurobiology & neurophysiology
- (3) Neuroanatomy
- (4) The first half of the perception-action cycle
- (5) Vision & object recognition
- (6) The second half of the perception-action cycle
- (7) The encoding-retrieval cycle in interaction with the perception-action cycle;
- (8) The neurocognition of language
- (9) The neurocognition of attention
- (10) Working memory: Cognitive Control

### Teaching methodologies (including evaluation)

The theoretical classes follow the classical lecture method. Nevertheless, the student is constantly invited to participate in order to better understand the different concepts and topics presented in the course. Students will be evaluated by written examinations at the end of the course. In order to pass the course the student will score an average of at least 10 (max 20). In case the student does not achieve an average of at least 10, the student will be provided the opportunity to pass the course through a final written exam.
