Objetivos de aprendizagem (conhecimentos, aptidões e competências)

The objective of the course is to provide progressive learning and training regarding the reality of the world of work in the thematic area of ecohydrology, water engineering and water management. The module will consider internships at stakeholders companies and institutions, research internships at University or associated research centers, or development of projects with the participation of stakeholders, at the University.

Conteúdos programáticos

- 1 ¿ identification of practical solutions by stakeholders from real water ecosystem situations
 - 2 ¿ develop, conceptually, the solutions
 - 3 ¿ Present and discuss the proposals with the stakeholders
-

Metodologias de ensino (avaliação incluída)

The course will be based on field visits and meetings with stakeholders to select the topics to be developed and on tutorial classes to support the development of the students projects

There is an articulation of matters and classes to ensure the appropriate sequence of the project development, between theoretical, practical and theoretical-practical classes. Course assessment comprises a report on the case that will be studied. The course assessment will consider the valuation from the stakeholders (50%)

Evaluation:

1. A group work written with individual presentation on practical project
 2. A final written exam if group work evaluation is below 10/20 points
-
